Expertise en masse all about explosion-protected crane technology

Explosion protection is a complex matter affecting many branches of industry. As the world's leading manufacturer of explosion-protected crane technology, STAHL CraneSystems has now published its own brochure on this subject. The opus is the result of 100 years of experience developing crane technology and explosion protection: STAHL CraneSystems built the first portal crane in 1898, and has been developing explosion-protected crane components since 1926.

This massed expertise makes the brochure a comprehensive handbook well worth reading: in addition to basic legal, physical and technical knowledge it provides information on user duties and obligations and possible sources of danger. In the second section of the brochure, STAHL CraneSystems presents its own solutions and the programme of explosion-protected lifting, drive and control technology which is the most extensive and complete in the world.

The brochure can be ordered free of charge at: marketing@stahlcranes.com.
