

STAHL CraneSystems is one of the world's leading manufacturers of crane and hoist technology, including explosion-protected versions. Around 600 committed staff at 9 international locations work toward the consistently high quality of our versatile product range and our comprehensive services. STAHL CraneSystems is embedded in an international group of companies comprising approx. 3,500 employees.

We have a vacancy in our Künzelsau headquarters beginning at the earliest possible date for an attractive training position in an open-minded and dynamic team as

Bachelor of Engineering (HS) m|f|o Mechanical Engineering

Theory and practice in a combined programme

Do you ideally want to study but also gain practical experience at the same time? With us, you can do both! Our cooperative study scheme combines training as an Industrial mechanic (IHK) with a standard bachelor's degree in Mechanical Engineering. This means you don't need to choose between vocational training and a university degree. You will start off by training for a job in practice and then you'll additionally build your theoretical knowledge in a study programme at Heilbronn University on the campus in Sontheim. During the semester breaks, you will directly apply this theory to practice on the job. In return, we will pay you an attractive salary, including during the study periods. Thanks to the intertwining of these two educational stages, you will acquire a dual qualification within a shortened period of less than five years. You will then be perfectly qualified and prepared, from both a theoretical and a practical perspective, for working life as an engineer.

Bachelor of Engineering (HS) m|f|o Mechanical Engineering at STAHL CraneSystems

As a future Bachelor of Engineering (HS) Mechanical Engineering, you will be primarily employed in the development and design of machines and systems. In this respect you will implement in addition to your technical knowledge also customer requirements and business management aspects. Thanks to the breadth of your knowledge you will also be occupied as a mechanical engineer in customer service, application consulting and technical sales.

Scope of training

- › Combined course of studies at the Heilbronn University in Sontheim and STAHL CraneSystems. Your academic studies will be combined with regular stages of practical experience in the company.
- › Combination of a degree course with vocational training. You will gain both a bachelor's degree and a certificate of vocational training
- › Financial support until completion of the course of studies

Duration of studies

- › The cooperative agreement covering 5 years is divided up into 2 years' vocational training as an Industrial mechanic in the combined vocational training/degree system and 3 years' study at the University of Heilbronn in Sontheim.

Qualification requirements

- › General or subject-restricted higher education entrance qualification with an average mark of at least 2.5
- › Interest in working with technical apparatus and data processing
- › You stand out for your drive, commitment, capacity for teamwork and enthusiasm
